procedures. Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome mapping

Claim 9; Fig 12; 306pp; English.

This sequence represents a human secreted protein amino acid sequence. The invention relates to sequences AAA87725-A87774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for

The cDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins. The cDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, obesity, mitocohondriogytopathies, diabetes, atherosclerosis, neurodegenerative disorders, graft rejection, Alzheimer's disease, dementia, hyperlipidaemia, septic shock and impotence

                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a human carbohydrate-modifying enzyme (CME). CME CC polynucleotides and polypeptides are useful for treating and diagnosing CC diseases associated with CME such as diabetes, autoimmune/inflammatory CC disorders such as AIDS, Addison's disease, adult respiratory distress cyndrome, allergies, anaemia, asthma, atherosclerosis, autoimmune CC thyroiditis, bronchitis, cholocystitis, contact dermatitis, Crohn's CC disease, emphysema, erythroblastosis fetalls, glomerulonephritis, Good CC pasture's syndrome, gout, Grave's disease, Hashimoto's thyroiditis, CC multiple sclerosis, myasthenia gravis, osteoarthritis, osteoporosis, CC gancreatitis, polymyositis, gsoriasis, Reiter's syndrome, arthritis, collis, uveitis, werner syndrome, systemic lupus erythematosus, ulcerative CC colitis, uveitis, and extracorporeal circulation, viral, bacterial, fungal CC parasitic, protozoal, and helminthic infections, trauma, or cancer. CME, or its catalytic or immunogenic fragment, is useful for drug screening

The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in regulation of haematopoiesis or lymphoid cell deficiencies. The proteins may also have utility in compositions used for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the treatment of burns. The proteins may be used in the treatment of periodontal disease and in other tooth repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment or prevention of tumours and inhibiting infection by bacteria, viruses,

subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. spene the sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a bit to be a sequence which is differentially regulated in an animal subjected to pain and a bit to be a sequence which is differentially regulated in an animal subjected to pain and a bit to be a sequence which is differentially regulated in an animal subjected to pain and a bit to be a sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-AUG-2001; 2001US-0312147P.

The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence represents a human secreted polypeptide of the invention. Note The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html.

human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; cantidiabetic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; concotropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polymucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other disorders and/or conditions such as: (a) cancers; (b) calsorders of the immune system; (c) anglogenesis disorders; (d) diseases of the immune system; (e) cardiovascular disorders; (f) diseases hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases appotosis; (g) neurological diseases; and (h) infectious diseases. They are also used to promote wound healing.

AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention The polynucleotide sequence given in AAA78381 to AAA78432 encode the

Sequence 303 AA;

Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antiinflammatory; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polynucleotides, polypeptides, antiagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other diseases, disorders, and/or conditions such as: (a) cancers; (b) diseases, disorders, and/or conditions such as: (a) cancers; (d) hyperproliferative disorders; (e) cardiovascular disorders; (f) disease associated with increase apoptosis; (g) neurological disease; and (h) infections diseases what, are allowed to recommend the associated with increase apoptosis; (g) recommendations as associated with increase apoptosis; (e) recommendations are applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  infectious diseases. They are also used to promote wound healing. AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Forty seven human nucleic acids encoding secreted proteins, useful in the treatment, prevention and diagnosis of cancers, disorders of the immune system, angiogenesis disorders, neurological diseases and hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 19;

                                                                                                                                                                                                                                                                                                                                                                                                                                  CC activity of NOVX polypeptides. For example, NOVX polypeptides and CC polynucleotides may be used to treat disorders associated with decreased CC expression or activity of NOVX by supplementing the pattent our CC production or to rectify mutations. Conversely, antisense NA molecules CC may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX CC polynucleotides and complementary sequences may also be used as DNA CC probes in diagnostic assays to detect and quantitate the presence of CC similar sequences in samples, and so which patients may be in need of CC restorative therapy. NOVX polypeptides may also be used as INA CC probes in diagnostic assays to detect and quantitate the presence of CC (agonists and antagonists) of the expression and activity of NOVX. The cused to modulate NOVX polypeptides may also be used as antigens in CC (agonists and antagonists) of the expression and activity of NOVX. The CC diagnostic agents for detecting the presence of NOVX in samples. NOVX CC polypeptides. The anti-NOVX polypeptide antibodies may also be used as diagnostic agents for detecting the presence of NOVX in samples. NOVX CC diagnose and treat metabolic disorders, diabetes, obesity, infectious cdisease, anorexia, cancer-associated cachexia, neurodegenerative cdisorders, Alzheimer's Disease, Parkinson's Disorder, immune disorders, cancer-associated cachexia, metabolic concers. The metabolic syndrome X and cC disturbances associated with obesity, the metabolic syndrome X and cC concersents the amino acid sequence of a human NOVX protein.
                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated NOVX polypeptides and polynucleotides. NOVX polypeptides and polynucleotides are used to prevent, diagnose or treat a medical condition in human related to the aberrant expression and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated NOVX polypeptides and nucleic acids, diagnosing and treating e.g. cancer, diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                     The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent cC that is differentially expressed in neuronal tissue of a first animal cC subjected to pain, a method for identifying an agent cC the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal cC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the activity in an animal of one or more of the polynucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more complication, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more complication and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (Chung), chronic constriction conjured in the sequence data for this patent did not form part of the printed specification, which is differentially expressed during pain. Note:

The sequence data for this patent did not form directly from WIPO at the specification, but was obtained, in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page; 1017pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENBANK; NP_061996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2003-268312/26

Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 17 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of cancer,

AAD34106-AAD34144 represent cDNAs corresponding to 17 human secreted protein genes, and AAE21578-AAE21616 represent the proteins they encode. AAE21617-AAE21627 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing. The therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 17 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of cancer, proliferative disorders, diseases of the immune system, AIDS, autoimmune diseases (rheumatoid arthritis), inflammation, allergies, neurological clisorders (Alzheimer's disease, Parkinson's disease), cognitive disorder, schizophrenia, asthma, skin disorders (psoriasis), sepsis, diabetes, kidney altergraps and control of the cancer of the cancer of the cancer, and cancer of the cancer of

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. The present sequence represents a human secreted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Seventeen nucleic acid molecules encoding human secreted proteins, useful for treating and preventing cancer, immune disorders (e.g. Addison's disease, and allergies), and cardiovascular disorders (e.g. myocardial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11;

                                                                                                                                                                                  The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The protein X are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. acquired haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldr-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                12-APR-2000; 2000US-0229358P

The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS) endocrine disorders (e.g. diabetes), haematopoletic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Albumin fusion protein; therapeutic protein X; human albumin; HA; human serum albumin; HSA; cancer; reproductive disorder; human serum albumin; HSA; cancer; reproductive disorder; hispatic disorder; immune disorder; endocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antilicer; immunomodulator; anti-HIV; antidiabetic; haemostatic; nootropic; neuroprotective; antiparkinsonian; antimicrobial; neuroleptic;
